The Thought Revolution Brought by Blockchain

Ideas that Change our Perception of the World

Prof. Crenguta Leaua

Berlin, 13 June 2025

A Thought Revolution in Motion

Blockchain isn't just a new technology. It's changing how we think about:

> ➤ Truth (what is real?)
>
> ➤ Trust (whom I can trust ?)
>
> ➤ Identity (who am I?)
>
> ➤ Power (who decides?)
>
> ➤ Time (can we undo?)
>
> ➤ Justice (who is fair?)
>
> ➤ Law (what is law?)
>
> ➤ Value (what is valuable?)
>
> ➤ Creator's responsibility (is it responsible ?)

Rethinking Truth and Trust

Old way:

➢ We used to trust big institutions—like governments, banks, and universities—to tell us what's true.

Blockchain's shift:

➢ Now, we trust the system of code and consensus. It's a 'trustless' system that works without needing to trust people.

New thought:

➢ Is something automatically true just because it's unchangeable on a blockchain?

Reimagining Identity

Old way:

➢ We proved our identity with official documents and institutions.

Blockchain's shift:

➢ You can control and verify your identity yourself, and have many digital identities.

New thought:

➢ If a program acts for you, who is really responsible?

Rethinking Time and Mistakes

Old way:

➤ People could fix mistakes and ask for forgiveness.

Blockchain's shift:

➤ Once recorded, something can't be changed.

New thought:

➤ Can a world without undo buttons still be human?

Challenging Justice and Ethics

Old way:

➢ Ethics involved human understanding and judgment.

Blockchain's shift:

➢ Code follows strict rules—fair but inflexible.

New thought:

➢ Can machines make fair decisions without human values?

Rewriting the Language of Law

Old way:

➢ Laws were written in words, and people interpreted them.

Blockchain's shift:

➢ Smart contracts are code. They do exactly what they're programmed to do.

New thought:

➢ Can true justice exist without context, emotion, or interpretation?

Reinventing How We Live Together

Old way:

➤ We built community through shared values and stories.

Blockchain's shift:

➤ Now, interactions are more about code and transactions.

New thought:

➤ Are we losing the emotional and social richness of human relationships?

Transforming Economics and Value

Old way:

➢ Governments controlled money and decided what it was worth.

Blockchain's shift:

➢ Value is created by communities and scarcity, not by central banks.

New thought:

➢ Is value now just whatever enough people agree it is?

Bulding a New Layer of Reality

Old way:

➤ Reality is natural/God made.

Blockchain's shift:

➤ Humans may create a new layer of reality (metaverse, NFTs) based on blockchain.

New thought:

➤ Is there a responsibility of the Creator for the world it creates ?

Blurring the Line Between Tech and Divinity

Old way:

➢ Only divine power was seen as perfect and unchanging.

Blockchain's shift:

➢ The system is everywhere, unchangeable, and final—like a digital god.

New thought:

➢ Are we building systems that take the place of spiritual or moral judgment?

Conclusion: Are We Ready for the Thought Revolution ?

Blockchain doesn't just disrupt institutions—it challenges deep philosophical categories:

- ➢ From subjectivity to objectivity (recorded truth vs. interpreted truth)

- ➢ From authority to consensus (centralized legitimacy vs. distributed validation)

- ➢ From reversible humanity to irreversible code (grace and error vs. execution and certainty)

- ➢ From the Acts of God as waiving responsibility to the creator's responsibility (nature and God vs humans as creators)

Are we ready for it ?

[Philosophical] Questions ?
